FOR IMMEDIATE RELEASE

Productive Plastics Wins Two Top Honors from the Society of Plastics Engineers at Thermoforming Conference

Productive Plastics, a leading manufacturer of custom heavy gauge plastic thermoformed parts, swept the top two parts competition awards, Judge's Choice and People's Choice, at the annual Society of Plastics Engineers Thermoforming Division Conference in Schaumburg IL.

Mt. Laurel, NJ (PRWeb) Dec 5, 2011 - Productive Plastics, a leading [custom thermoforming](#) and [vacuum forming](#) manufacturer of heavy gauge plastic parts, was honored to win the two top awards, People's Choice and Judges' Choice, in this year's parts competition at the annual Society of Plastics Engineers Thermoforming Division Conference in Schaumburg IL.

For this year's competition, Productive Plastics featured a recent project manufactured for the medical diagnostic device industry, a PET-CT Scanner Enclosure Assembly. The unit is comprised of 10 pressure-formed components utilizing Kydex T (PVC/Acrylic sheet), and the complex nature of its design required numerous under-cut details, secondary tooling, and precise finishing.

"This medical assembly delivers close tolerance, cosmetic parts with a high degree of internal mechanical and value added assembly," stated Hal Gilham, Productive Plastics CEO. "The success of this project and the awards reflect our ongoing commitment to innovation, quality, process improvement, and cost-effective solutions."

About Productive Plastics

Headquartered in Mt. Laurel NJ and established in 1955, Productive Plastics offers thermoformed plastics through processes such as [pressure thermoforming](#), [vacuum forming](#) and [twin sheet thermoforming](#). In addition to the medical diagnostic industry, Productive Plastics is also a leading manufacturer of heavy gauged thermoformed parts for transportation, kiosk, industrial, and plastic enclosure markets. Productive Plastics is part of the Productive group of companies, which includes Sensigraphics, a custom manufacturer/supplier of membrane switches, graphic overlays, control panels, keypads, and touch screens and Productive Industrial Finishing, which provides industrial finishing solutions for spray and powder coating applications.
